EMR Report Viewer

The EMR Report Viewer is accessed through the Reports Module, and is designed to replace the current NextGen reporting system. This application has the ability to save and print reports, and is accessed through a single button, “Create or View Reports”.

Unlike the NextGen reporting system, the Reports Viewer will “version” each saved report and save each report individually in a Notes Tree. Reports for both current and past encounters may be found in the Notes Tree. The “Entire Visit” and “H&P” reports are not included in the Reports Viewer, and are still accessed under individual buttons in the Reports module.

Saved Reports Tree

Ultrasound Interface

The Ultrasound Interface has been successfully rolled out to each of the seven Perinatal EMR practices located in San Jose, Denver, Dallas, San Antonio, Ft. Worth, and Tacoma. The faxing solution, FaxPress, is currently employed in Denver and Tacoma, and is now available to all EMR sites.

Obstetrix Stats

The Obstetrix Medical Group currently represents 26 practices that include 16 Perinatal, 2 Developmental Pediatrics, and 8 Pediatric Cardiology groups. These practices consist of a current total of 136 providers for their represented specialties.

In 2005, the NextGen Scheduler program was implemented in 6 very diverse practices, including Perinatal, Developmental Peds, and Peds Cardiology. The EMR program was implemented in 3 Perinatal practices in 2005.

Obstetrix Medical Group of Colorado was the largest practice to date to go on EMR with their 8 physician providers, 13 Nurse practitioners, and 2 Certified Nurse Midwives.

The rollouts will continue in 2006 for both Scheduler and the “Fusion” 5.0 upgrade version of EMR.
Continuing Intensive Care Services

The Decision Tree will generate 99300, 99299, and 99298 based on the present weight and the statement of the daily note.

99300 - 2501-5000gms
99299 – 1500-2500gms
99298 - <1500gms

The statement reads:
Intensive cardiac and respiratory monitoring, continuous and/or frequent vital sign monitoring.

In the system BabySteps or RDS you should enter today’s weight and select Yes or No to the statement on the signature screen.

Signature Section:

IF YES the continuous monitoring statement will print on the note in the Physical Exam section.

IF NO, the statement will not print.

Using the Filter Feature

1. You can now filter through patients by using the Filter button next to Teams.

2. Click on the button and a screen will open as shown below allowing the user to search out a patient’s record by MR#, Last Name, First Name, etc.

3. Enter data in one of the fields and click the Search button, a list will appear based on the data entered, allowing the user to select the patient record needed.

4. This feature eliminates the need to scroll through numerous patients in order to find a particular patient record.

Documenting L&D Attendance in RDS

1. When documenting attendance at delivery only the names of the Clinician/s that attended are entered in the “Attend Deliver” and Physician Attending” fields.

2. If only the NNP attended the delivery then only the NNP’s name should be documented in the note (As shown below).

3. There should not be a Physician’s name in the ‘Physician at Delivery’ field if the physician was not in the delivery room.

4. When the note is printed the information will appear as shown below under the Delivery section of the note.

Interim Discharge Summary

Interim Discharge Summary has been added to the program to allow the Clinician to PRINT an update of the patient’s care for Pediatricians and Consultants that may request the information.

To retrieve a summary:
1) Highlight the patient in the patient list
2) Click on to the left
3) Click Save/Print (Please do not edit this note)
4) The note will be printed which will resemble an actual discharge note with a few differences.

Delivered by vaginal delivery. The patient was born on 04/06/05. At birth, the patient was 3,500g, length was 49.8 cm, head circumference was 34 cm. The delivery was attended by Dr. Jenny K. APGAR scores were 9 at 1 minute and 9 at 5 minutes. Test at delivery included delivery attendant, positive
